Stay the course amid market volatility

BlackRock.

Financial markets have been roiled recently amid fears over the impact of the fast-spreading coronavirus. These near-term disruptions to economic activity are the result of efforts to contain it. We see a downshift in 2020 global growth, with uncertainty around the size and pace of slowdown. While there are always unplanned risks, we do expect a rebound in activity once the disruptions dissipate and don't see it derailing the U.S. expansion at this time.

What are key takeaways for investors? First, we encourage investors to keep things in historical perspective. Second, know the importance of staying invested, and avoid reacting in ways that could derail long-term financial goals. Finally, consider investment strategies to help you build a more resilient portfolio.

Keep things in perspective

To provide historical context, the table below illustrates how the stock market responded during other past growth scares and bear markets. It also shows the period of positive market performance in the 12 months that followed these crises.

Dates of S&P's biggest declines	**Black Monday** 8/25/87-12/4/87	**Gulf War** 7/16/90-10/11/90	**Asia Monetary Crisis** 7/17/98-8/31/98	**Tech Bubble** 3/27/00-10/9/02	**Financial Crisis** 10/9/07-3/9/09	**US Credit Downgrade** 3/10/11-10/3/11	**Trade War** 10/3/18-12/24/18
U.S. stocks	**-33.5%**	**-19.9%**	**-19.3%**	**-49.0%**	**-56.8%**	**-19.0%**	**-19.6%**
Next 12 months	**+21.4%**	**+29.1%**	**+37.9%**	**+33.7%**	**+68.6%**	**+32.0%**	**+37.1%**

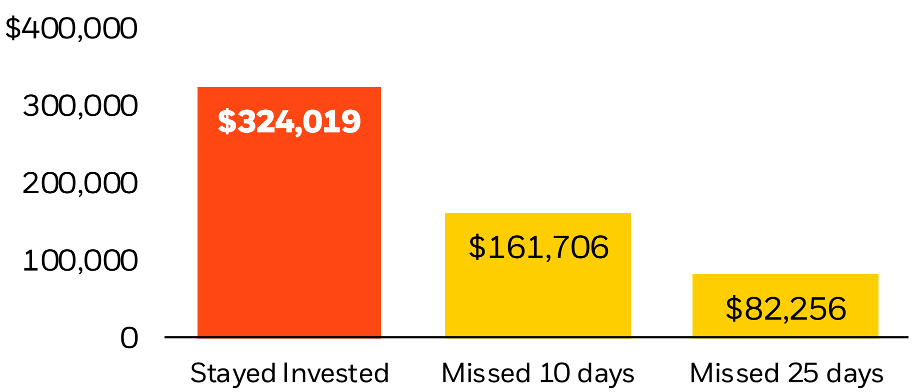
Stay invested

The chart below shows how a hypothetical $100,000 investment in stocks would have been affected by missing the market's top-performing days over the 20-year period from January 1, 2000 to December 31, 2019. An individual who remained invested for the entire period would have accumulated $324,019, while an investor who missed ten of the top-performing days during that period would have accumulated $161,706.



Over the last 20 years, 24 of the 25 worst trading days were within **one month** of the 25 **best** trading days[1]

Sources: BlackRock; Bloomberg, Morningstar as of 2/28/20. U.S. stocks are represented by the S&P 500 Index, an unmanaged index that is generally considered representative of the U.S. stock market. Index performance is for illustrative purposes only. It is not possible to invest directly in an index. [1]Only period without a corresponding best day within one month was September 17, 2001. Past performance does not guarantee or indicate future results.

Strategies to consider in this environment

Consistent with our 2020 outlook, we continue to advocate for portfolio resilience while maintaining long-term perspective.

Stay invested with low volatility equity strategies

Multi-asset funds can help navigate market volatility

MALOX	BlackRock Global Allocation Fund
BIICX	BlackRock Multi-Asset Income Fund

Important Risks: The mutual funds are actively managed and their characteristics will vary. Stock and bond values fluctuate in price so the value of your investment can go down depending on market conditions. Investing in mid-cap companies may entail greater risk than large-cap companies, due to shorter operating histories, less seasoned management or lower trading volumes. These funds may use derivatives to hedge its investments or to seek to enhance returns. Derivatives entail risks relating to liquidity, leverage and credit that may reduce returns and increase volatility. Fixed Income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issues will not be able to make principal and interest payments. The iShares Minimum Volatility Funds may experience more than minimum volatility as there is no guarantee that the underlying index's strategy of seeking to lower volatility will be successful. International investing involves risks, including risks related to foreign currency, limited liquidity, less government regulation and the possibility of substantial volatility due to adverse political, economic or other developments. These risks often are heightened for investments in emerging/developing markets and in concentrations of single countries.
