View returns for any global, regional or country MSCI index. There are three main variables to select: the market for the index (All Country, Developed Markets, Emerging Markets, Frontier Markets, etc.), the currency (US dollar, Euro, or local), and the index level (price return, total return, net return). You can further tailor your results by selecting earlier "as of" dates, specific capitalization segments (large, mid, small, micro, etc.) and styles (growth, value, etc.).

Note: for historical data of provisional indexes, please make sure to select an "As of" date prior to July 1, 2008, when these indexes were discontinued. For additional historical index data, contact [MSCI Client Service](#).
