

US Clean Power at "Inflection Point": BNEF Summit New York

May 20, 2024

The US is "at a historic inflection point [...in its] global leadership in a carbon constrained world," David Crane, Under Secretary for Infrastructure at the US Department of Energy, told the BloombergNEF Summit New York. This sentiment

...

- Siting, permitting, and grids remain front of mind. Participants noted that these factors are a key constraint to the speed of new renewables deployment. Yet the grid itself is also hampered by challenges with siting and environmental permitting. Industry and government agree on a suite of solutions - including shot clocks, streamlining, pre-designation zones, community engagement and staffing - but their introduction is still nascent and patchworked.
