End of day index data search

View returns for any global, regional or country MSCI index. There are three main variables to select: the market for the index (All Country, Developed Markets, Emerging Markets, Frontier Markets, etc.), the currency (US dollar, Euro, or local), and the index level (price return, total return, net return). You can further tailor your results by selecting earlier "as of" dates, specific capitalization segments (large, mid, small, micro, etc.) and styles (growth, value, etc.).
